My comments and counter-comments on Consultation Paper On Issues related to Telecommunications
Infrastructure policy

Sir,

Your consultation paper does not address an important issue of revising norms on EMF RADIATION.

Recently DoT released REPORT OF THE INTER-MINISTERIAL COMMITTEE ON EMF RADIATION which has recommended that the RF exposure limits in India may be lowered to 1/10th of the existing level without explaining or justifying why they recommend 1/10th. DoT has asked stake holders to send their comments by 26th Feb 2011. You have also recommended in-building solutions. Some persons will be exposed to radiation from in-building antennas for several hours per day because their work tables are in their main lobe. What will be the effect on their health on short term and long term basis? This question has not been raised anybody. It needs to be addressed seriously.

Yours faithfully,

Dr. P. J. Joglekar
